UNITED STATES GOVERNMENT

SECRET

Memorandum

TO : DAD, IO

cc : Chief, GSD

FROM : DAD, S&D

DATE: 11 December 1964

SUBJECT:

I would recommend that the various applications be placed in a chart form with the required size, weight, operating time, and other characteristics spelled out and then the past developments matched against this and their characteristics. Indicate where they fell short. For example, in the BTB-10 it isn't clear whether or not it met the other requirements which were sighted in other words, whether it would be useful in any of the five applications. The chart probably ought to have a remarks column so that some additional data which will be of interest can be indicated. In addition this might be the right place to indicate whether or not through modification or attention to reliability some of the existing equipment can be made suitable for any of the applications.

The material contained in this present draft should be retained as supplemental information.
